Experience

Caarl   75008 Paris
Apprentice FullStack Developer   June 2023 | October 2024

B2B and B2B2C insurance company providing legal services, including chatbot, unpaid bill recovery, virtual lawyer consultations, legal information, and document templates.
Provides APIs for easy service integration with customers and their end clients

Some of implemented features:
- Recurring appointment for lawyer: Enhance lawyer engagement on the platform while increasing availability by 60%, giving end customers more options when selecting a lawyer
- API log retrieval and visualization : Tool that enables faster tracking of customer actions
- UI Mockup integration to improve user experience
- Form workflow implementation
- CSV checker : Simplifies data imports for businesses, reducing errors on our end
- Email templating

Stack : MERN+N : MongoDB, Express, Node.js, Next.js, Typescript, Javascript.

Act In Mad   Paris
Co-Founder – Growth & Tech Developer   November 2024 | now
- Website and blog for a theater company. Static Site Generation.
- Almost no Javascript is shipped in the browser, making it fast and efficient
- Features : Registration and payment for classes, invoice generation, automated email
- Pocketbase has been used because it is fast to ship, it include a rich text editor in the admin panel

Stack : Astro, Typescript, Pocketbase

Projects --- Check my portfolio for more detailed projects : https://me.dellabs.nexus

OrderOrbit   *Adonis, TypeScript, PostgresSQL, Redis, React*
- Front-End and Back-End
- Trade cryptocurrencies across multiple centralized brokers (Binance, Coinbase), and decentralized exchange on blockchain using CCXT, a unified API

Telegram Fetcher   *Deno, PostgresSQL, MTKruto*
- A microservice that fetches trading orders from Telegram, stores them in PostgreSQL, and triggers functions in PostgreSQL to pass the order to OrderOrbit Back-End.

JSR (open source contribution)   *Rust, Deno, Fresh, PostgresSQL*
- Show the number of dependent packages and package dependencies for a given package
- Navigated through a large codebase in Rust and TypeScript, queried the database with SQL, routed with Rust, and displayed data using Fresh.

Education

AdaTechSchool   75010 Paris
FullStack Web Development Program   February 2022 | October 2024
